

## PRODUCT BULLETIN

# **ELDORADO CT-2400**

## CARBON REMOVER AND PAINT STRIPPER

*Eldorado CT-2400* is a two-phase, cold-solvent, tank-type chlorinated carbon remover and paint stripper. It is particularly recommended for use on engine parts to remove baked-on soils, especially on reciprocating engines.

### PROPERTIES

1. Safe on all metals and will not embrittle high-strength steel.
2. Rapidly removes soils, carbon, and paint films
3. Requires no heat and long lasting.
4. Surfactants are biodegradable
5. Nonflammable and low vapor toxicity.
6. Free rinsing
7. Approved by or conforms to: MIL-C-19853D, Type I, AMS 1378, Rolls-Royce

### USE

*CT-2400* is used as received in a mild steel tank at room temperature. *CT-2400* contains two layers as packaged in the drums; the top layer forming a liquid seal to prevent evaporation of active solvents in the carbon and paint-removing layer below. If a portion of a drum is to be used, agitate contents thoroughly before pouring and allow mixture to separate before use. Immerse parts completely in lower layer and allow remaining for 30 minutes or more, as required, for soil removal. Rinse with pressure spray, steam, or petroleum solvent. Do not allow parts being processed to extend into water seal layer. Avoid heavy contamination of oils and greases to increase the tank life. Precleaning of parts with an alkaline cleaner may prove economical in high-production situations. Monitor sludge formation to prevent soil redeposition. Maintain upper layer at a depth of 2 inches per foot of depth of lower layer by additions of water. Seal ratios may be determined through the use of a glass sight tube.

### PRECAUTIONS

Since *CT-2400* contains chlorinated solvents and cresylates, proper precautions should be taken to prevent contact with skin, eyes, or clothing. Use with adequate ventilation. Consult MSDS for further precautions.
