ELDORADO HT-2263

NONCHLORINATED PAINT REMOVER

Eldorado HT-2263 is an alkaline, amine-activated, diphasic liquid paint and carbon remover, for use in immersion tanks for cleaning aircraft parts and for stripping resistant paint films from metal surfaces.

PROPERTIES

1. Incorporates an oil upper layer to reduce evaporation loss
2. Effective for removal of chemically resistant paint films and powder coatings
3. Contains no free hydroxides, chlorinated solvents, chromates, or phenols
4. Surfactants are biodegradable
5. Safe on steel, aluminum, titanium, magnesium, and other structural metals
6. Approved by or conforms to: MIL-PRF-83936C

USE

HT-2263 is used in mild steel equipment as received at 150° - 190°F. Immerse parts to be stripped in the *HT-2263* lower layer for 15 minutes to 2 hours, as required for complete removal. Solvent loss and odors may be reduced by a water-cooling coil around the top lip of the tank. Parts may be rinsed with water or petroleum solvent. Pressure water spray rinse is recommended. Operate at lowest temperature which will successfully remove the paint or soil, from parts to reduce solvent loss. Insure adequate depth for part to be completely immersed in active lower layer. Avoid contamination of *HT-2263* with water.

PRECAUTIONS

Avoid skin and eye contact through the use of face shield and protective rubber clothing. *HT-2263* contains amines, which may cause allergic reactions. Provide adequate ventilation, during operation, including, if necessary, exhaust ducting. Consult MSDS for further details.
