ELDORADO PR-4010 PAINT REMOVER, EPOXY SYSTEMS

ELDORADO PR-4010 is a formic acid-activated, dichloromethane-based, viscous stripper, used to strip durable aircraft epoxy and polyurethane paint systems from metal surfaces.

PROPERTIES

1. Non-flammable, acidic pH
2. Fast acting, high performance stripper works well in cooler weather.
3. Effective for removal of polyurethane, and epoxy paints.
4. Safe for use on aluminum, mild steel, titanium, and cad plate.
5. Approved by or conforms to: MIL-R-81903A, Type II, Class 2, and AMS 1376.

USE

Works well at temperatures ranging from 40° to 95°F. Do not apply to wet surfaces*. Spray or brush undiluted **PR-4010** paint stripper onto the surface. Allow at least 15 minutes for the paint to be loosened. Conditions of humidity and temperature will dictate dwell time. Agitate to dislodge loosened paint, then squeegee stripper residues and paint from the surface. Plastics sheeting placed under the aircraft have been found to be useful to facilitate the collection of paint chips and stripper residue.

Clean stripped surface with a good alkaline cleaner to remove all stripper residues. Pay close attention to cleaning residues out from skin laps and seams.

PRECAUTIONS

Warning: Corrosive to skin and eyes. Before using this product, read the MSDS for special safety precautions and first aid measures. **PR-4010** must be used with adequate ventilation, due to the high-chlorinated solvent content. When spraying application is used, full wash rack gear—consisting of rubber boots, gloves, foul-weather gear, and facemask—should be worn to minimize contact of the material with the skin. If **PR-4010** accidentally contacts the skin, immediately flush the affected area with water. In case of contact with eyes, flush thoroughly with water and seek medical attention.

*Avoid contaminating **PR-4010** with water. **PR-4010** may cause pitting of aluminum or magnesium when contaminated with water. Do not use on magnesium or high-strength steel.
